Sequence(feature=Sequence(feature=Value(dtype='string',
id='token'), length=-1, id='sequence'), length=-1,
id='references')}}, usage: ""
Computes BLEU score of translated segments against one
or more references.
```

Args:

 predictions: list of translations to score.

 Each translation should be tokenized into a
list of tokens.

 references: list of lists of references for each
translation.

 Each reference should be tokenized into a list
of tokens.

 max_order: Maximum n-gram order to use when
computing BLEU score.

 smooth: Whether or not to apply Lin et al. 2004
smoothing.

Returns:

```
'bleu': bleu score,
'precisions': geometric mean of n-gram precisions,
'brevity_penalty': brevity penalty,
'length_ratio': ratio of lengths,
'translation_length': translation_length,
'reference_length': reference_length
```

Examples:

```
>>> predictions = [
...     ["hello", "there", "general", "kenobi"],
# tokenized prediction of the first sample
...     ["foo", "bar", "foobar"]
# tokenized prediction of the second sample
