Sequence(feature=Sequence(feature=Value(dtype='string',
id='token'), length=-1, id='sequence'), length=-1,
id='references')}, usage: """
Computes BLEU score of translated segments against one
or more references.
Args:
    predictions: list of translations to score.
        Each translation should be tokenized into a
list of tokens.
    references: list of lists of references for each
translation.
        Each reference should be tokenized into a list
of tokens.
    max_order: Maximum n-gram order to use when
computing BLEU score.
    smooth: Whether or not to apply Lin et al. 2004
smoothing.
Returns:
    'bleu': bleu score,
    'precisions': geometric mean of n-gram precisions,
    'brevity_penalty': brevity penalty,
    'length_ratio': ratio of lengths,
    'translation_length': translation_length,
    'reference_length': reference_length
Examples:

    >>> predictions = [
    ...     ["hello", "there", "general", "kenobi"],
# tokenized prediction of the first sample
    ...     ["foo", "bar", "foobar"]
# tokenized prediction of the second sample
